

Half Round Gutters Profile Overview

Along with the value of modern aesthetics, half round gutters are a performance upgrade with significantly reduced friction and resistance.

The symmetrical U-shape complements rounded architecture associated with historic homes or newer structures designed to be less angular.

- 6" Half Round
- 7" Half Round **NEW**
- 8" Half Round

What makes a specific size new?

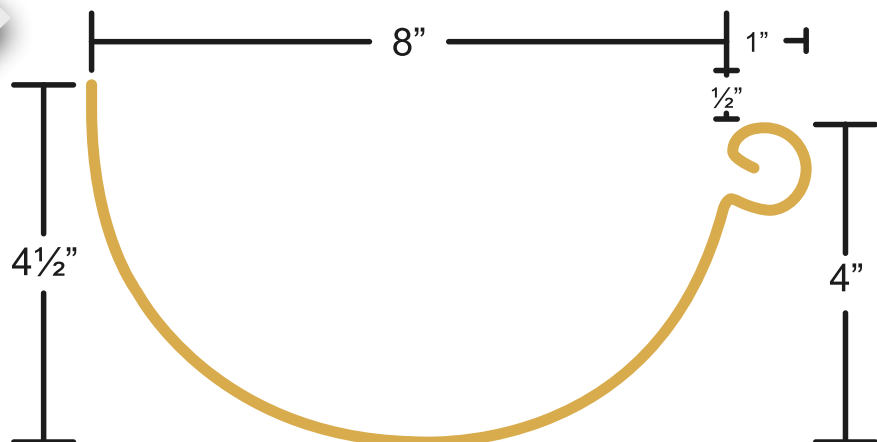

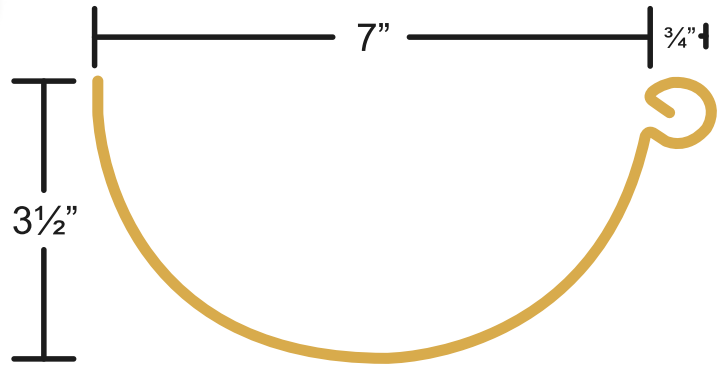

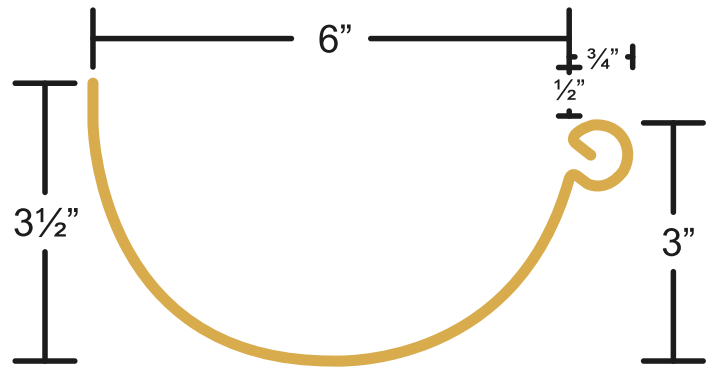

It takes specialized machines to produce gutters. By producing them on site, we're able to pass the savings to you and greatly reduce waste metal.

Typical Gauge & Metal Thickness

- .027" thickness for 6-inch
- .032" thickness for 7- and 8-inch

FAQ: Half Round Gutters

- ◆ **Ask about Seamless!** Gutters made from a single piece of material for a more up-scale look.
- ◆ **Ask about Copper!** The ultimate classy look. Yes, we produce half round copper gutters for homes.
- ◆ We also produce half round gutters in the common materials – aluminum, steel, zinc, and Galvalume.
- ◆ Maintenance is critical - obstructed rainwater can pool and may cause long-term damage.
- ◆ Leaf and gutter guards are available for half round gutters on residential and commercial properties.

Drawings are proportionally accurate, but not to scale.
